

C1  
a processor for arranging the plurality of postal data elements in an order where the second postal data element precedes the first postal data element;

an output for providing a representation representing the plurality of postal data elements in the arranged order.

---

7. (Twice Amended) Apparatus for processing a plurality of postal data elements, the apparatus comprising:

C2  
a processor for arranging the plurality of postal data elements in an order such that each postal data element preceding a second postal data element is independent of the second postal data element;

an output for providing a representation representing the plurality of postal data elements in the arranged order.

---

13. (Twice Amended) Apparatus for conducting a postage franking transaction to generate a representation representing data, the apparatus comprising:

C3  
a processor for identifying a first subset of the data which is unaffected by the postage franking transaction and a second subset of the data which is subject to change during the postage franking transaction;

an output for providing a representation representing the first subset of the data and the second subset of the data, the representation being partitioned into a first part and a second part thereof, the first subset of the data and the

C3 second subset of the data being represented by the first part and the second part, respectively.

---

20. (Twice Amended) Apparatus for conducting postage franking transaction, the apparatus comprising:

a processor for processing a plurality of data elements;

C4 an output for generating at least a first symbol and a second symbol representing the data elements, at least part of the first symbol representing a first subset of the data elements which is unaffected by the postage franking transaction, and at least part of the second symbol representing a second subset of the data elements which is subject to change during the postage franking transaction.

---

26. (Twice Amended) Apparatus for generating a postage indicium based on at least first data, the first data being a function of second data, the apparatus comprising:

C5 a processor for determining at least one candidate for the first data based on a predicted version of the second data;

a comparator for comparing an actual version of the second data with the predicted version thereof;

an output for generating the postage indicium based on the candidate for the first data when the actual version matches the predicted version.

---

34. (Twice Amended) Apparatus for creating a postage indicium representing a plurality of data elements, and at least one code for authenticating selected ones of the data elements, the apparatus comprising:

C4 an interface for receiving a request for creating the postage indicium;

a processor for performing computations to generated the code, selected ones of the computations being performed before the request is received, the code being generated based on results of the selected computations after the request is received.

Please add the following claim(s):

SUBD17 89. The apparatus of claim 1, wherein said output includes a printer for printing said representation upon a mailpiece. *intended use*

90. The apparatus of claim 89, further comprising the mailpiece.

C7 X 91. The apparatus of claim 1, further comprising a mailpiece having said representation thereon.

92. The apparatus of claim 7, wherein said output includes a printer for printing said representation upon a mailpiece. *intended use*

93. The apparatus of claim 92, further comprising the mailpiece.

\* 94. The apparatus of claim 7, further comprising a mailpiece having said representation thereon.

95. The apparatus of claim 13, wherein said output includes a printer for printing said representation upon a mailpiece.

96. The apparatus of claim 95, further comprising the mailpiece.

C7 \* 97. The apparatus of claim 13, further comprising a mailpiece having said representation thereon.

\* 98. The apparatus of claim 25, further comprising the mailpiece having said symbols thereon.

\* 99. The apparatus of claim 20, further comprising a mailpiece having said symbols thereon.

\* 100. The apparatus of claim 26, further comprising a mailpiece having said indicium thereon.

101. The apparatus of claim 26, wherein said output includes a printer for printing said indicium upon a mailpiece.

102. The apparatus of claim 101, further comprising the mailpiece.

\* 103. The apparatus of claim 34, further comprising a mailpiece having said indicium thereon.

C7 104. The apparatus of claim 34, further comprising a printer for printing said indicium upon a mailpiece.

105. The apparatus of claim 104, further comprising the mailpiece.

SUB 287 \* 106. The apparatus of claim 40, further comprising a medium having said symbol thereon.

---

REMARKS

A marked-up version of the rewritten claims is attached hereto.

The printer has been deleted from the independent claims. It is now in added dependent claims.

Claim 1 recites the ordering of the postal data elements with a first one of the elements being a function of a second one of the elements. Claim 7 recites the independence of the elements and an ordering. Claim 13 recites a first subset which is
